POTTER ANNOUNCES SUCCESSFUL FLOW SWITCH TESTS WITH HYDROTECH FIRE & MECHANICAL RESIDENTIAL MANIFOLDS

St. Louis, MO, USA — Potter Electric Signal Company, LLC, is pleased to announce it has successfully tested its flowswitches with Hydrotech Fire & Mechanical Ltd. of Altrincham, Cheshire, UK, an industry leader in residential sprinkler test valve assemblies. Hydrotech's new Residential Riser, now coupled with Potter Electric's VSR and VS-SPB flowswitch technology, creates a complete and fully approved sprinkler test valve assembly for the UK and EU market. The residential market will now have access to a test assembly using flowswitches specifically designed, tested and certified for use in fire protection systems.

"We at Potter are very pleased to have successfully completed these tests with Hydrotech," said Steve Broadley, the European Business Development Manager at Potter Electric Signal. "Both companies are market leaders of residential sprinkler test valves and flowswitches respectively. With Hydrotech now offering our VSR-S (EU) and VS-SPB flowswitches on their riser assemblies, customers can have full confidence in and expect faster detection and alerts from our devices when a sprinkler has been activated, providing a completely certified assembly."

The new Hydrotech Residential Riser is now available for sale to the European market.

For more information, please contact Potter or Hydrotech directly.
